

Assembly Instructions for the Christmas Tree Inlay Kit

This kit is designed for the Sierra Vista Pen Kit. Slide the blackwood barrel onto the brass tube that comes with your pen kit. Insert the green Christmas tree into its recess and secure these 2 pieces together using thin CA making sure the brass tube is centered with the recess on the blackwood barrel for the tree. Be careful not to get any CA into the engraved area of the tree. Also apply a few drops at both ends of the barrel to secure the brass tube to the blackwood barrel.

Mix up a small amount of 2-part epoxy and just a dot of black acrylic paint. Use a flat toothpick to apply the mixture into the scene. Screeed off as much excess as you can and allow to cure. Sand the ends flush with the brass tube. Don't use a barrel trimmer for this. Mount on the lathe for final turning and sanding. We prefer using a CA finish on these kits but all popular finish techniques will work fine. If you have and questions regarding this or any of our inlay pen kits, e-mail me at kallenshaan@cox.net
